

About Me

I'm a research-driven and impact-focused Product Designer with a strong foundation in UX design, usability testing, and design systems. My experience spans end-to-end product design, user research, prototyping, and workflow optimisation across both enterprise and consumer applications.

My approach is both analytical and intuitive. Leveraging user insights, data, and iterative design to solve complex problems while keeping the experience simple and engaging. I've worked on improving Salesforce-based products, collaborating with global teams, and using AI-driven insights to uncover patterns and enhance user experiences.

I take ownership of my work and enjoy pushing design forward, connecting every decision to business goals and measurable outcomes. From increasing user engagement to simplifying workflows, I aim to create experiences that are not just visually refined, but meaningful, efficient, and impactful.

Work Experience

Mar 2022 – Present

UX Designer (*promoted once*)

Metacube Softwares, Jaipur

UX Research Salesforce LDS Collaboration User Interaction Usability testing Accessibility

- Led usability testing, tracked issues, iterated on designs, and collaborated with product managers, developers, and visual designers to ensure alignment with business goals and user needs.
- Improving the UI & UX of Certinia's Resource & Project management tools while working/Improving the Salesforce Lightning Design System
- Collaborating with UK/Spain/US UX team to create custom design system & designs to solve user problems
- Conducted user and stakeholder research, analysed task models, defined workflows, and created wireframes and prototypes to inform design solutions and improve user experience.
- Applied AI to analyze large sets of customer interviews and usage data, identifying hidden patterns and unmet needs; used these insights to redesign workflows in Salesforce apps, reduce user friction, and boost engagement.
